

[Experts: Lethal Levels of “Off-Scale” Radiation At Fukushima Infer Millions Dying](#)

Posted: 08 Aug 2011 08:46 AM PDT

Experts warn off-scale levels of radiation, which are at their highest levels since the disaster began almost 5 months ago, infers hundreds millions dying from the nuclear fallout.

[Deborah Dupre](#), Human Rights Examiner
August 5, 2011

Fukushima nuclear power plant radiation recordings of [external gamma radiation have been so high](#) this week, they went off scale [said veteran nuclear expert](#) Arnie Gunderson on Thursday after the famous physicist, Dr. Chris Busby [told](#) the Japanese people this week that radioactive air contamination there now is 300 times that of Chernobyl and 1000 times the atomic bomb peak in 1963, possibly inferring that hundreds of millions of people are now dying from Fukushima radiation, including people in the United States.

If noticing unusual amounts of hair falling out, confusion, nose bleeds or other [odd symptoms typical of radiation sickness](#), it might be due to the United States record high levels of radiation, now multiple times acceptable safety limits not only on the west coast, but also in other locations around the nation.

Because Fukushima radiation data retrieval and interpretation has been so complex or non-existent for the concerned public, citizen reporters in Japan and United States have now established easily accessible ways to view radiation levels on the internet.

Fukushima radiation depopulation unfathomable: Possibly 100s of millions deaths

Dr Janette Sherman, a highly respected physician and acknowledged expert in radiation exposure who has reported a north-east United States [35% baby death spike since Fukushima fall-out reached the nation](#), concurs with estimates that world wide, the Chernobyl Kill is one million people killed to date [reported NOVA News](#). Extrapolating, worldwide deaths by Fukushima radiation could eventually be hundreds of millions of people, becoming the most significant depopulation event to date.

<http://www.youtube.com/watch?v=oFGX6Tnj-xM> NUCLEAR POWER PLANTS ARE BAD!

“Soon after the Fukushima accident last month, I stated publicly that a nuclear event of this size and catastrophic potential could present a medical problem of very large dimensions. Events have proven this observation to be true despite the nuclear industry’s campaign about the “minimal” health effects of so-called low-level radiation.” –Dr. Helen Caldicott

Dr. Chris Busby, world famous physicist, said tests conducted at the respected Harwell Radiation Laboratory in England demonstrate that airborne radiation in Japan is 1,000 times higher than radioactive “fallout” at the peak in 1963 of H-Bomb detonations by nuclear powers. In March, Busby had estimated that Fukushima radiation to be [72,000 times greater than what the United States released at Hiroshima](#).

“Let’s wipe the Tokyo Electric Power Company and the General Electric officials and policy makers off the face of the Earth, as they manifestly deserve,” asserted Dr. Busby when addressing the Japanese this week.

Watch: Lethal Levels of Radiation at Fukushima: What Are the Implications?

TEPCO has discovered locations on the Fukushima plant site with lethal levels of external gamma radiation. Fairwinds takes a close look at how this radiation might have been deposited and how similar radioactive material would have been released offsite.

Thirty-nine year nuclear industry veteran Arnie Gunderson of Fairwinds stated Tuesday, “There will continue to be enormous spikes for at least ten years.”

Dr. Busby advocates not only independent studies of the nuclear catastrophe. He received a resounding applause when he told the Japanese people this week that in his opinion, scientists who said this accident was not a problem must be prosecuted.

“Many nuclear scientists said it was not a problem when they knew it was a serious accident. People who listened to those scientists and did not run away when they should have. Because of that, people will die.”

Busby explained that the World Health Organization is tied to the Nuclear Industry so their research is bogus. In studying Fukushima, the World Health Organization expects to find no effects “and so that’s what they’ll find,” he said.

[According to Dr. Helen Caldicott](#), WHO’s subjugation to the nuclear industry has been widely known since May 28, 1959, when at the 12th World Health Assembly, WHO drafted an agreement with the International Atomic Energy Agency (IAEA) granting the right of prior approval over any research it might undertake or report on to the IAEA, the group many people, including some journalists, think is a neutral watchdog but is, “in fact, an advocate for the nuclear power industry.”

”The agency shall seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity through the world,” the founding papers state, as reported in [The Age](#).

Latest nuclear ‘peace, health and prosperity’ spike

TEPCO discovered a hot spot location on the Fukushima nuclear power plant site a few days ago with lethal levels of external gamma radiation.

How the latest radiation spike at Fukushima might have been deposited and also how similar radioactive material would have been released off-site [was presented this week by Gunderson](#), with over 25-years of experience in nuclear decommissioning oversight, co-authored the first edition of the *Department Of Energy (DOE) Decommissioning Handbook*. (See embedded Vimeo, “*Lethal Levels of Radiation at Fukushima: What Are the Implications?*”, Arnie Gunderson, Fairwinds)

Gunderson noted that over 1000 REMs were released according to TEPCO earlier this week, an amount that, “if there, would mean death within a couple of days.”

“Those kinds of exposures cause extensive neurological breakdowns that can’t be reversed medically,” Gunderson reported.

Baby death rate spike since Fukushima radiation cover-up

Babies are dying at a 35% increased rate in eight northwest U.S. cities since the Fukushima meltdowns, evidence supporting radiation expert [Joseph Mangano's assertion that Americans will pay a high price for government and media cover-up and deception](#) related to Fukushima radiation, such as telling women that there are only trace levels of radiation from Fukushima and that these are harmless. Women in the United States will now have a special commonality with Japanese women in terms of suffering spontaneous abortions and infant deaths.

A report by Mangano, executive director of the [Radiation and Public Health Project](#) and co-authored by Janette Sherman about increased infant morbidity since the Fukushima catastrophe, highlights that although the United States spends billions on medical care, as of 2006, the US ranked 28th in the world in infant mortality, over twice that of the lowest ranked countries. ([DHHS, CDC, National Center for Health Statistics](#). Health United States 2010, Table 20, p. 131, February 2011.)

Friday's [Counterpunch article](#) by Mangano and Sherman emphasizes that the recent CDC *Morbidity and Mortality Weekly Report* indicates northwest U.S. cities, Boise ID, Seattle WA, Portland OR, plus northern California cities of Santa Cruz, Sacramento, San Francisco, San Jose, and Berkeley have each reported data on deaths among those younger than one year of age including:

4 weeks ending March 19, 2011 - 37 deaths (avg. 9.25 per week)
10 weeks ending May 28, 2011 - 125 deaths (avg. 12.50 per week)

"This amounts to an increase of 35% (the total for the entire U.S. rose about 2.3%), and is statistically significant. Of [further significance](#) is that those dates include the four weeks before and the ten weeks after the Fukushima Nuclear Power Plant disaster."

As Mangano told the Examiner, warning Americans about Fukushima fallout, unborn and babies are more vulnerable because their cells are rapidly dividing and the delivered dose of radiation is proportionally larger than delivered to adults.

Why should we care if there may be a link between Fukushima and the death of children?

"Because we need to measure the actual levels of isotopes in the environment and in the bodies of people exposed to determine if the fallout is killing our most vulnerable," the experts say.

Advertisement

But that research is not being conducted, against best interest of the public according to Mangano.

"The research is not technically difficult – the political and economic barriers may be greater," he and Sherman report.

Bandshevsky and others conducted such research as it related to the [Chernobyl meltdown](#), confirming the connection.

Dr. Helen Caldicott has also cited the recent New York Academy of Sciences report that stated over 1 million people died as a direct result of the 1986 Chernobyl melt-down, mostly from cancer.

"The situation is very grim and not just for the Japanese people," said Caldicott.

Only days after the Fukushima meltdowns began, it took a group [of Japanese grassroots volunteers to rescue babies and pregnant women from the Fukushima Nuclear power plant fallout](#), since the Japanese government told everyone within the 20-mile radius danger zone of the leaking plants to remain indoors where people are being radiated.

The Radiation and Public Health Project is one of the only non-government organizations in the U.S. consistently warning the public about the Fukushima dangers for Americans.

As in the nation's Gulf coast region where, due to the April 20, 2010 oil-rig explosion, radiation from BP's oil plus chemicals and biological agents from Corexit are [linked to harm](#) of [pregnant women](#) and babies, the government is making little effort to prevent American women and babies from suffering due to Fukushima meltdowns.

[New research](#) has shed light on sharp increases in both [Gulf miscarriages](#) and [Gulf dead baby dolphins](#).

Mangano and Sherman state, "Low birth weight babies, born too soon and too small, face a lifetime of health problems, including cerebral palsy, and behavioral and learning problems placing an enormous physical, emotional and economic burdens on society as a whole and on those caring for them."

While "death of a young child is devastating to a family," it is most devastating to the mother.

NOVANEWS

Nuclear detonation Nuclear Defense Agency

Dr Chris Busby Speaks with the Japanese People

by [Bob Nichols](#)

(San Francisco) – Dr. Chris Busby, world famous physicist, said tests run at the respected Harwell Radiation Laboratory in England demonstrate the airborne radiation in Japan is 1,000 times higher than radioactive “fallout” at the peak in 1963 of H-Bomb detonations by the nuclear powers. The calculations were on radioactive Cesium 137.

Busby certifies the poisonous, radioactive Japanese air to be at least 300 times worse than the air during the Chernobyl nuclear reactor disaster. Dr Janette Sherman, a highly respected physician and an acknowledged expert in radiation exposure, has estimated the world wide Chernobyl Kill to be at least one million people killed to date. The Chernobyl Disaster occurred April 26, 1986.

Dr. Busby obtained donated car air filters from vehicles in Fukushima and Chiba Prefectures as well as from Tokyo, Japan. Busby stated the radiation per cubic meter of air in Japan was calculated by knowing the size of the engines and the number of miles driven.

The estimates must be considered as conservative or low since the smallest particles go through the car air filters and emerge from the car’s exhaust. The smallest radioactive particles simply go through a human’s skin or go to the bottom of a human’s lungs and stay there. The poison radiates cells within a range extending 20 cells deep in all directions. The dead and dying or mutated cells become cancers and hundreds of other radiation related diseases.

The earth’s few nuclear states detonated a total of 2,045 Atomic and Hydrogen Bombs. During the period before international treaties shut them down, the US detonated more than 1,300 nuclear weapons “tests,” first in Japan at Hiroshima and Nagasaki, next in the South Pacific, then largely in Nevada, USA. The Nevada site is in the South Western US 60 miles, or 96.5 km, from Las Vegas.

The H-Bomb fallout spread first northeastward with the prevailing winds; then went around the world. Yes, the US Department of Energy, DOE, lists the unwarranted Atomic Bomb attack at Hiroshima and Nagasaki, Japan as “Tests”.

In 1963 the Partial Nuclear Test Ban Treaty was passed by the US Senate and most of the countries of the world. The ban extended to above ground atmospheric nuclear detonations only. However, some 25% of the underground detonations broke through to the surface or “vented”.

The on-going world wide nuclear slaughter would all make more sense if the massive war-like Fukushima Daiichi nuclear onslaught was an attack by Aliens from outer space. But no, there is no explanation as simple as that. This “kill them all” effect is a result of decisions of some amongst us, military elites and the richest corporations worldwide.

The lethal radioactive result, or Fukushima Kill, enveloping the world is unmistakable and inevitable, though.

Responsibility, Revenge and Punishment

What can we do to those who are killing us; and, for those no longer breathing, those already killed?

Well, first, we do know our murderers’ names and everything about them is in multiple public records in many countries all over the world. They can’t hide. They are much too egotistical to even try.

Officially they are grouped together as the Tokyo Electric Power Company and the General Electric Company. Strong and powerful as companies, they are weak and fearful of the wrath of the people in countries throughout the world.

Let us first Shun Them in the Old Way. That means to have nothing whatsoever to do with them either in business or private life. To us, they are dead.

Then the world can move to extract vengeance according to the Rule of Law. In the American Wild West of the Old Days it was called “Give them a trial then Hang’em – all legal like.”

Vengeance and Revenge for killing many millions of us with stationary nuclear weapons – leaking atomic reactors – shall be ours. Let’s wipe the Tokyo Electric Power Company and the General Electric officials and policy makers off the face of the Earth, as they manifestly deserve.

[End]

Sources and Notes:

Dr. Busby’s Data comparing radiation levels from the radioactive peak of atmospheric nuclear weapon detonations to Chernobyl and Fukushima.

As Measured at Harwell by British Radiation Laboratory and representing the Northern Hemisphere atmospheric level they reported Cesium 137 was 2.4 milliBecquerel per cubic meter. At the peak of the Chernobyl Radiation Disaster and Explosion the atmospheric radiation level was was 10 milliBecquerel per Kg of air, which is about a cubic Meter. A cubic meter of air weighs 1.189 kg.

Car air filters from Fukushima Prefecture, Chiba Prefecture and Tokyo, show the atmospheric level of Cesium 137 in June, 2011 for Cesium 137 was 2.7 Becquerels per cubic meter.

The Fukushima, Japan atmospheric radiation levels are 1000 times higher than at the peak of Atomic and Hydrogen Bomb atmospheric testing in 1963.

Measured Cesium 137 radiation from Chiba Prefecture, about 140 km from Fukushima, was 300 times higher than at the peak of atmospheric testing.

[Chernobyl: Consequences of the Catastrophe for People and Nature](#), written by A. V. Yablokov, V. B. Nesterenko and A. V. Nesterenko, published by the New York Academy of Sciences in December 2009, translated and edited into a book by Dr. Janette Sherman. Dr. Sherman's Website: janettesherman.com/about
From Dr Sherman's website: janettesherman.com/books

“This is a collection of papers translated from the Russian with some revised and updated contributions. Written by leading authorities from Eastern Europe, the volume outlines the history of the health and environmental consequences of the Chernobyl disaster. Although there has been discussion of the impact of nuclear accidents and Chernobyl in particular, never before has there been a comprehensive presentation of all the available information concerning the health and environmental effects of the low dose radioactive contaminants, especially those emitted from the Chernobyl nuclear power plant. Official discussions from the International Atomic Energy Agency and associated United Nations' agencies (e.g. the Chernobyl Forum reports) have largely downplayed or ignored many of the findings reported in the Eastern European scientific literature and consequently have erred by not including these assessments.”
