

## BIO-PROFILE REPORTS

The bio-profile reports cover the key environmental indicators that are responsible for optimum cellular wellness.

The profiles use a highly visual pie-chart format, colored and labeled clearly to make them easy to interpret and follow by practitioners and patients alike.

Each category in the profile is rated as priority, advisory and normal, making prioritisation simple. They are also marked as demand, load, disturbance and sensitivity to provide guidance for protocol decision making.

Sample of Key Wellness Indicators Overview chart.

Each category has its own chart which shows the elements in detail

Please note that the given results are not meant to replace or compete with traditional laboratory test results, as in absolute numbers and absolute scales. The advantage of the profiler report is a clear overview of the main topics and strongest resonances, that the cell and whole body system responds to. It is intended to be an indicator for topics that might be overseen in typical analysis. And to help prioritise the next steps to wellness.

Any health issues, discomfort or worries should always be attended to by a practitioner. The bio-profile report does not claim medical validity, since science in the bio-field is still in its infancy. It is an innovative technology for the 21st century, giving an insight into connections and imminent issues for the whole body, individualized and current.

Physics is changing the way we view the world and technology is increasing the speed at which we experience this change.

## BIO PROFILER

A New Wellness Perspective

The bio-resonance laboratory  
in your hands

# THE BIO-RESONANCE LABORATORY IN YOUR HANDS

The Bio-Profiler provides you with the two key elements to add to the success of your clinic/practice. Firstly, the class leading bio-profile service, which will enhance your professional approach and support your decision making. Secondly, it will provide you with new income, whilst protecting and increasing existing revenue streams.

## A NEW WELLNESS PERSPECTIVE

We are pleased to introduce our Bio-Profiler, a revolutionary technological breakthrough that puts the power of a 'state of the art' bio-resonance laboratory directly into your hands.

Our Bio-Profiler is a 'first of its kind' device that interfaces cellular bio-information at the point of use and then transfers this information to a high-tech center for detailed assessment.

The bio-resonance processing takes less than 10 minutes and the results are returned in the form of a comprehensive Bio-Profile report.

Each bio-profile report provides an in-depth, highly visual and user-friendly view of many key wellness indicators for the tested person.

The profile results are based on the cellular resonance values of the individual and afford a new and insightful view of the body's imbalances.

## BIO-PROFILER

The desktop device uses a proprietary bio-resonance technology to interface specific frequency resonance information from cellular bio-markers, like those found in hair. Simply download and install, plug the profiler into your PC or laptop: You are ready to scan bio-profiles for your clients and patients.

Entering the data, taking a sample of 2-3 hairs and performing the scan takes just minutes. Then (or later), the data is sent off via the internet for evaluation. About ten minutes later you will receive a secure link via email for downloading the detailed report. It's quick, non-invasive and simple, in the clinic and on the road.

## THE TECHNOLOGY CENTER

The scanned data package is encrypted and sent via secure connection to our technology center for processing. The center hardware is hosted on secure, highly protected security servers, 24 hours a day, 365 days a year.

We use advanced bio-resonance system infrastructure; incorporating CE Class IIa approved devices and proprietary recognition software programs to identify the specific intensity of bio-resonance connections that appear between the subject and the test information.

Easy setup: Download software, install, plug in the profiler, register. You're set to go.

Enter user data, place 2-3 hairs on the test field, cover with acrylic disk and click „Scan“ in your software.
